Professional Learning Event 2020:

Exploring your Watershed
July 29-31, 2020

Water runs downhill and we all live in a watershed. Find out how to help your students learn the abiotic, biotic and cultural aspects of your local watershed. Create a sense of stewardship in your students regarding their vital freshwater resources. Use watershed as a topic for students to learn in their community by providing a way to integrate content, social service and a sense of belonging to one’s home place and beyond.

This Workshop Includes:
2.5 days of meaningful, field-based, project-based experiences with watershed curriculum that explores how watersheds are connected, the way humans rely on them, interact with them, and impact them. Water is a scarce resource. Shared lessons are aligned to the Next Generation Science Standards.

At This Workshop You Will:
• Gain hands-on experience in scientific principles of abiotic, biotic and cultural impacts of having both healthy and contaminated watersheds
• Experience curriculum lessons that may be customized to your local watershed
• Explore ways to use project-based learning methods to identify a scientific question that your students would like to answer regarding your watershed
• Enjoy a relaxing and informative evening nature cruise or kayak paddle on Muscongus Bay.

Course Fee: $625 tuition inclusive of student lesson materials, equipment for watershed investigations, 3 continental breakfasts, 2 lunches, and a kayaking or boat tour.

Housing is available in a unique 200 year old historic home here on the Port Clyde Campus at $75 per night on a space availability basis.

1.5 CEUs are available through the University of Southern Maine or 15 contact/professional development hours.
